

Preliminary concepts:

Adding -3 is the same as subtracting ____

Subtracting 8 is the same as adding ____

Multiplying by $\frac{1}{2}$ is the same as dividing by ____

Dividing by 7 is the same as multiplying by ____

Multiplying by $\frac{6}{5}$ is the same as dividing by ____

Dividing by $\frac{9}{4}$ is the same as multiplying by ____

PART 1) Easy stuff:

| | | | |
|--------------|----------------|-----------|------------------------------|
| $A + 3 = 21$ | $-12 - B = 88$ | $4C = 72$ | $\frac{D}{7} = \frac{5}{42}$ |
|--------------|----------------|-----------|------------------------------|

PART 2) One step above the Easy stuff:

How are these related to the PART 1) equations?

| | | | |
|---------------------------|-----------------|------------------|----------------------------------|
| $\frac{9}{5}(A) + 3 = 21$ | $-12 - 4B = 88$ | $4(C + 11) = 72$ | $\frac{D - 2}{7} = \frac{5}{42}$ |
|---------------------------|-----------------|------------------|----------------------------------|

PART 3) Two steps above the Easy stuff:

How are these related to the PART 2) equations?

| | | | |
|--------------------------------|-----------------------|---------------------------------------|-----------------------------------|
| $\frac{9}{5}(A + 42) + 3 = 21$ | $-12 - 4(B - 7) = 88$ | $4\left(\frac{C}{3} + 11\right) = 72$ | $\frac{3D - 2}{7} = \frac{5}{42}$ |
|--------------------------------|-----------------------|---------------------------------------|-----------------------------------|

PART 4) Solve these linear equations for the variable y.

| | | | |
|--------------------|----------------|--------------------------------------|-----------------------------|
| $3y - 4x + 39 = 0$ | $5x - 8y = 56$ | $\frac{(y-2)}{(x+3)} = \frac{-6}{7}$ | $\frac{3(y+7)}{2(x-9)} = 1$ |
|--------------------|----------------|--------------------------------------|-----------------------------|

PART 5) Equations of lines.

a) Graph the points $(3, 4)$ & $(-3, 6)$. Use a straightedge to extend a line with arrows beyond the grid. Write the equation of the line.

b) Graph the points $(-6, -3)$ & $(4, -1)$. Use a straightedge to extend a line with arrows beyond the grid. Write the equation of the line.

Part 6) Linear Equations in Point-Slope form

$y = m(x - h) + k$ where (h, k) is a point on the line and m is the slope
